

Product

DALI PRO 2 IoT

EAN-010: 4062172114189

Release Notes

App Version: 2.2.31 **Date: February 9, 2023**

New features

- Increased the press time required to store a preset color in the UI.
- Enabled automatic updates of the TW, RGB, and RGBW status indications on the relevant command buttons.
- Enhanced navigation speed and stability between views.

Bugfixes:

- Fixed frequent disconnections from the controller.
- Resolved iOS RGBW control app crashes.
- Addressed artifact issues in scroll views (horizontal and vertical).
- Fixed Color Jog Wheel size and centering in Android and iOS, including the status ball position.
- Improved refresh state for "Tunable White," RGB, and RGBW buttons upon receiving feedback from the controller.
- Fixed temperature display issue in the "Tunable White" controller's central button and status ball.
- Resolved various UI feedback issues.
- Fixed the problem where the 4 square logo (Select views button) wasn't visible when starting the app.
- In Demo Mode, the selected Jog wheel color now matches the feedback shown in the UI.
